## PerfectFuse Interfacings

It is the inside of clothing that counts when body or stability is needed in a garment. Our line of high-quality, wide, weft fusible interfacing is the best for fashion sewing because it was specifically developed by sewers, for sewers! Try it and you will see the difference in your finished sewing projects.

### PerfectFuse SHEER

100% polyester weft, 60"-wide.

No preshrinking. Lightweight, but crisp. Nice for shirts. Use stable lengthwise direction to keep bias facings from stretching. Use lengthwise strips in fly fronts and to add body when applying invisible zippers.

### PerfectFuse LIGHT

100% polyester weft, 60"-wide.

No preshrinking. Lightweight, but soft, so nice as underlining in back of jackets and to add body to jacket facings and upper collar. Adheres well to textured fabrics. Always test interfacings on a scrap to make sure you like the feel and outer look.

### PerfectFuse MEDIUM

64% rayon/36% poly weft, 60"-wide.

Preshrink. Nice for jacket fronts and under collars and for coatings which are heavy but need some stability.

### PerfectFuse TAILORultra

78% poly/22% rayon weft, 66"-wide.

Preshrink. Nice for jacket fronts and under collars. Feels like cashmere and adds body without stiffness. Used by very high end designers. Even works on silkies or cottons to make them into jackets.

All are available in white or grey/black.

## Our Interfacing Goals (and how they were achieved):

- **Quality.** Marta Alto and Pati Palmer tested hundreds of products over a four-year period.
- **Simplification.** We narrowed the choices to four that solve nearly every interfacing dilemma.
- **Good performance.** All of our interfacings are wefts, which do not pill or shred after several launderings. They add stability as well as softness.
- **Wider widths.** These interfacings are 60" and 66" wide, more than TWICE the width of most other interfacings (which are 22" or 29").
- **Good instructions.** Each interfacing has its own instructions in addition to instructions for using fusibles in general. These use & care instructions have been researched, tested, and edited again and again over a two-year period.

- **See the difference.** There is a distinct visual difference between each one.
- **Reasonable prices.** Based on the wider width, the interfacings are generally less per yard than competitor's narrower products. Because the product is labor intensive, to keep the prices down, there is no distributor pricing. Therefore, PerfectFuse will be found only in independent fabric stores, not chain stores.
- **Instant, no-wait purchasing.** You don't have to wait in line to buy these interfacings. PerfectFuse comes in one-yard or three-yard packages. One yard of the wider width is plenty for most projects and you can store the unused portions in the plastic envelope. One yard of TailorUltra will do two jackets, depending on size and style. One yard of Sheer will be enough for several shirts.
- **Less confusion in your interfacing stash at home.** The protective storage bag will keep the interfacing clean and you will always know which interfacing is inside.
