

Fusible Stay Tapes from Sewkeyse Available at www.pamelaspatterns.com

How and Where to Apply Fusible Tapes to Fabric:

- Fusible Tapes should be applied with a hot iron, plenty of steam and a press cloth.

½" Woven Stay Tape (blue package):

This is a stable tape with little stretch. Fuse it to the wrong side of the front edge of the shoulder seam. Serge or stitch the front and back together, catching the stay tape into the stitching. Nice stable shoulder seams that don't sag!

½" Knit Stay Tape (yellow package):

This tape will form easily around curves. Fuse it to the wrong side of the neckline edge to keep it stable and prevent "gaposis". When you stitch a neck binding on, it gives you not only stability, but an edge to follow for the perfect seam allowance!

1" Double Sided Fusible Stay Tape (green package):

Knit fabrics can be super stretchy. Keep the hems smooth and even by fusing this tape to the wrong side of hems. If the seam is curved, clip the tape to help form around the curves. When the tape has cooled from the iron, peel the release paper off and press up the hem. It gives you a perfect 1" hem without measuring. For a narrower hem, just trim the tape to the desired width. For knits, finish off by stitching with a slight zigzag "wobble" stitch (width of 1.0,

length of 2.5) and steam – or block - back in shape. This can also be used for blind hemming with knits. Beautiful ripple free hems!

1 ¼" Knit Interfacing Stay Tape (pink package):

This is a high quality interfacing cut into a 1 ¼" width. It will stabilize the front of a knit cardigan style top, hems in woven fabric, and zipper areas. Smooth looking and a convenient size!
